

# KIOWARE BROWSER

**KioWare Browser Software** is a secure browser that is used to replace your current browser (Internet Explorer, FireFox, etc). KioWare Browser becomes the **default browser** and will be invoked anytime the user tries to view browser-based content. While KioWare Browser **limits Internet access**, it does allow full access to the desktop and OS, therefore it is not ideal for kiosk projects. Instead, it is ideal for projects that require access to the OS, desktop and additional non-browser-based applications, such as training room or testing projects.

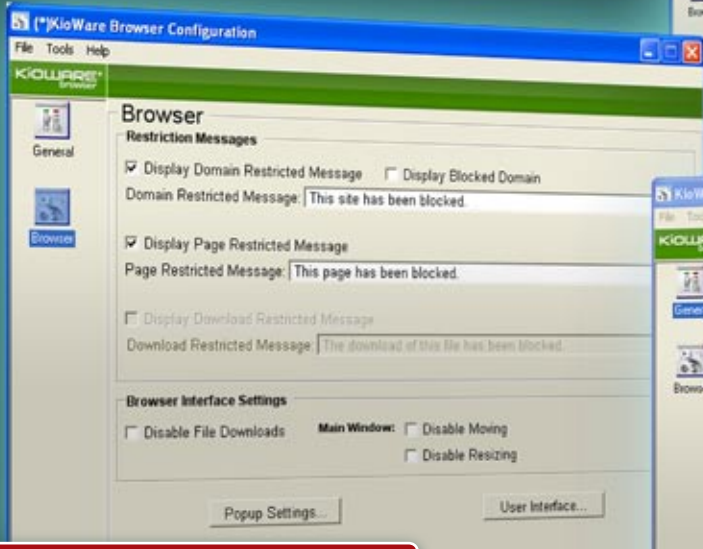

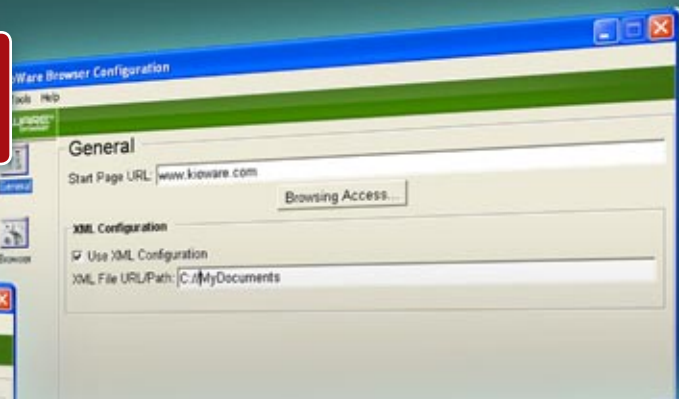

**KiOWARE®**  
kiosk system software
