

# KIOWARE FULL WITH SERVER

**KioWare Full with Server** provides browser, OS and desktop lockdown for the kiosk, while the server side console allows you to **maintain communication** with your kiosks from a central server. Through the server side console you are able to **remotely monitor** the kiosk health, retrieve kiosk **usage reports**, collect **survey data**, and push content out to the kiosks.

Additionally, KioWare Server provides a feature that enables **ad hoc grouping**, meaning kiosk projects can be sorted into an unlimited number of groups, enabling different content to be pushed out to multiple groups. This allows for easy distribution of various promotions to different stores.

**KIOWARE®**  
kiosk system software
