

KioWare Server ASP is designed to support enterprise and Application Service Provider (ASP) installations, giving clients or resellers the ability to host the software for **multiple client sites**. KioWare Server ASP provides an additional site data layer that enables kiosks to be organized at a higher level than the project level currently in regular KioWare Full with Server. This gives resellers and ASPs the ability to make each site layer a different customer, allowing for **complete separation** of data and user access, and controlling what the site client is able to do and see within KioWare Server ASP.

KIOWARE®
kiosk system software

877.843.4790 (TOLL FREE) • +1.717.843.4790 • WWW.KIOWARE.COM
